

Guide Insights Into Action with Advanced Features Setup

Maximize time and energy with thresholds, smartFORMS, dashboards, and other customizable features. Our specialists are experts at configuring eduCLIMBER to focus on the data and visualizations your team needs to take the best next action.

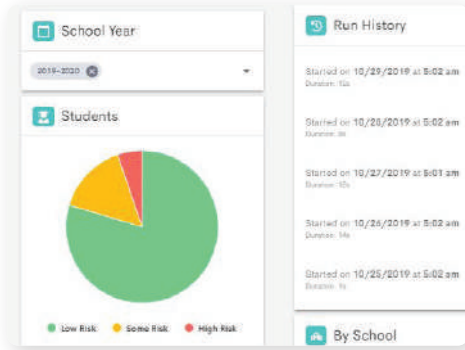

BENEFITS:

Partner with Illuminate's Advanced Features Setup experts to:

- ✓ **Customize features** to spend less time creating one-off spreadsheets and forms and more time identifying the right resources to support student learning goals
- ✓ **Better investigate student progress** with unique, automated alerts
- ✓ **Increase staff usage** of eduCLIMBER with flexible tools that are empowering and easy to use
- ✓ **Increase data visibility** for key stakeholders across the district and with the public via configurable dashboards

How can Advanced Features Setup Help You?

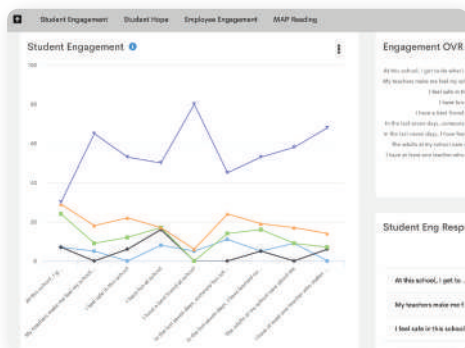

Create Effective Thresholds

Collaborate with our advanced features specialists to design and build custom thresholds in eduCLIMBER that alert your team when students are in need of academic and/or social-emotional behavior (SEB) supports. Use attendance, incident, and assessment data; tag students; and attach smartFORMS automatically when data are updated.

Impactful and Actionable Student Plans

Get the most out of the smartFORMS feature in eduCLIMBER with custom configurations. With the right links between student data (e.g., test scores, student strengths, observational information) and actionable next steps, you can provide targeted support to positively impact student performance.

Dashboard Configuration

Communicate key findings to stakeholders across your district as well as the public with custom dashboards. Whatever the topic—tiered systems of support, mental health, achievement and growth—you can work with our experts to create and share dashboards that tell a clear and compelling story.

Our Advanced Features Setup Services are perfect for your team if you have...

 eduCLIMBER and are looking for support on Threshold, smartFORM, or Intervention setup.
